

Amendment to the Abstract of the Specification:

✓ The applicants replace the Abstract with the following:

A¹ A method and system for efficiently personalizing computer hardware. Under the present invention, a subscriber will store computer personalization information pertaining to their existing servers and workstations with a provider. As the servers and/or workstations are replaced or upgraded (~~or upgraded~~), the personalization information can be transmitted/downloaded from the provider to the new or upgraded (~~or upgraded~~) servers. Once the new servers are personalized, the personalization information pertaining to the old workstations will be sent/transmitted to the new workstations. This transmitted information will be then used to personalize the new workstations.
